## **INTRODUCTION**

E-commerce platforms have become an essential part of modern businesses and understanding how to build and manage them is a key skill for web developers. In this lab, I have demonstrated the setup of a local development environment using XAMPP as the server stack and WordPress as the content management system. By integrating the WooCommerce plugin, I have showed how to transform a standard WordPress site into a fully functional online store. This exercise provided hands-on experience with configuring an e-commerce site locally, offering a safe environment for experimentation and learning before moving to a live server.

## **OBJECTIVE**

To locally install and configure a fully functional WooCommerce online store using WordPress and XAMPP and understand the workflow of an e-commerce site in a local environment.

## **TOOLS AND REFERENCES**

### **Software Required**

- 1) XAMPP (Apache + MySQL)
- 2) WordPress (latest version)
- 3) WooCommerce Plugin
- 4) eCommerce WordPress Theme (Storefront/Astra/OceanWP)

### **References**

- 1) XAMPP Official Site
- 2) Download WordPress
- 3) WooCommerce Beginner Guide
- 4) YouTube tutorials: How to Install WordPress Locally with XAMPP

## STEP-BY-STEP PROCEDURE WITH SCREENSHOTS

### Step 1: Install XAMPP

1. Download XAMPP from official site.
2. Install it in C:\xampp for windows.

Apache Friends Download Hosting Community About

# Download

XAMPP is an easy to install Apache distribution containing MariaDB, PHP, and Perl. Just download and start the installer. It's that easy. Installers created using [InstallBuilder](#).

## XAMPP for Windows 8.0.30, 8.1.25 & 8.2.12

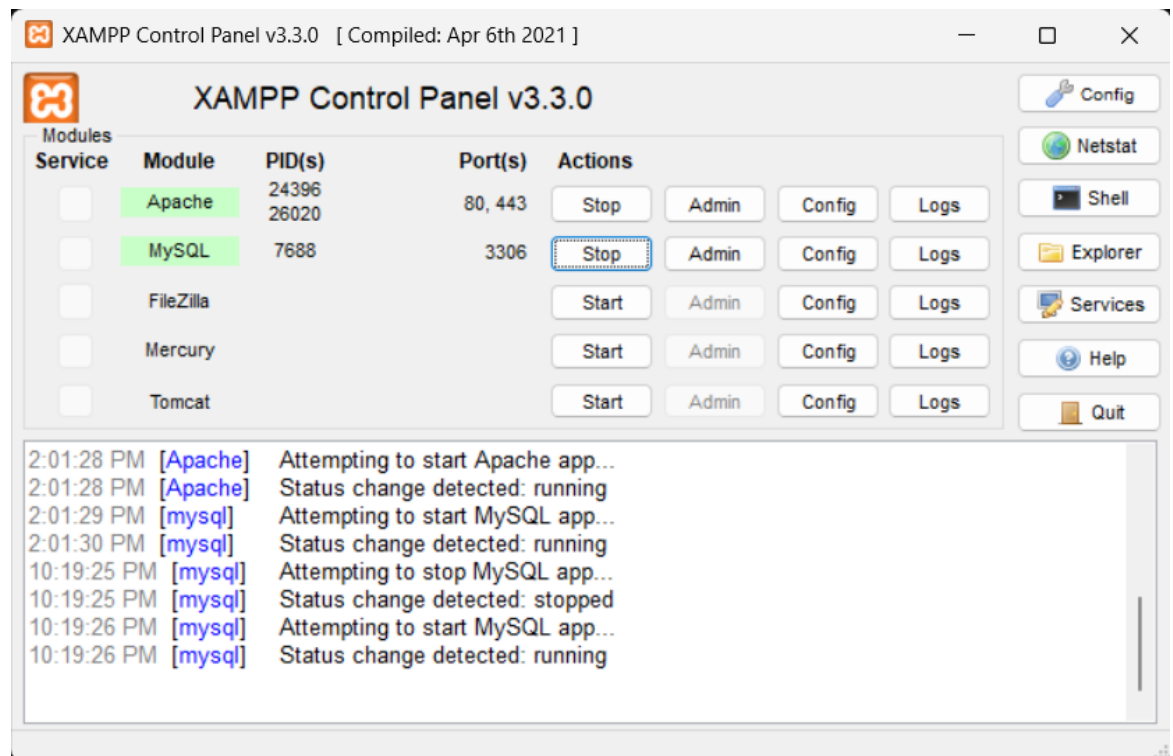

| Version             |                                  | Checksum            |                      |                                   | Size   |
|---------------------|----------------------------------|---------------------|----------------------|-----------------------------------|--------|
| 8.0.30 / PHP 8.0.30 | <a href="#">What's Included?</a> | <a href="#">md5</a> | <a href="#">sha1</a> | <a href="#">Download (64 bit)</a> | 144 Mb |
| 8.1.25 / PHP 8.1.25 | <a href="#">What's Included?</a> | <a href="#">md5</a> | <a href="#">sha1</a> | <a href="#">Download (64 bit)</a> | 148 Mb |
| 8.2.12 / PHP 8.2.12 | <a href="#">What's Included?</a> | <a href="#">md5</a> | <a href="#">sha1</a> | <a href="#">Download (64 bit)</a> | 149 Mb |

[Requirements](#) [More Downloads »](#)

Windows XP or 2003 are not supported. You can download a compatible version of XAMPP for these platforms [here](#).

*Screenshot 1: Downloading XAMPP from official site*

3. During installation, ensure Apache and MySQL are selected.
4. Open XAMPP Control Panel → Start Apache and MySQL.

*Screenshot 2: XAMPP Control Panel with Apache & MySQL running*

**Theory:** XAMPP provides a local server environment for PHP and MySQL, which is required to run WordPress locally.

## Step 2: Download and Set Up WordPress

1. Download WordPress from [wordpress.org](https://wordpress.org).
2. Extract the ZIP.
3. Copy the folder to:
4. C:\xampp\htdocs\TrendSetter

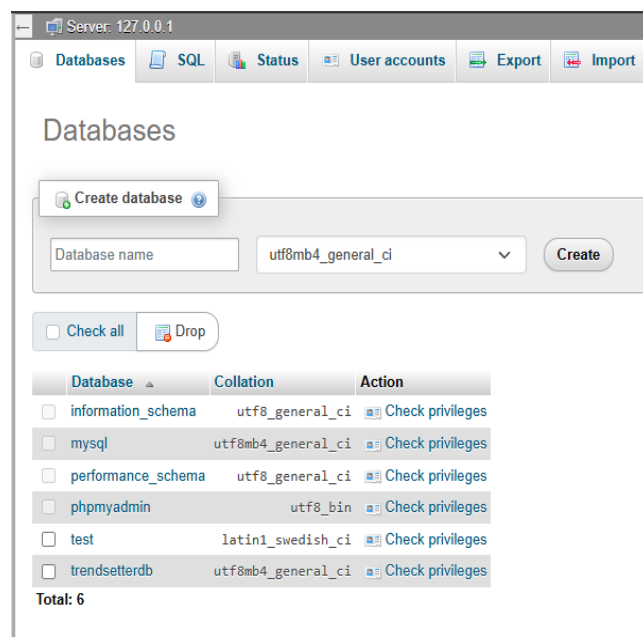

| Name         | Date modified      | Type               | Size  |
|--------------|--------------------|--------------------|-------|
| dashboard    | 12/20/2025 1:46 PM | File folder        |       |
| img          | 12/20/2025 1:46 PM | File folder        |       |
| TrendSetter  | 12/20/2025 2:23 PM | File folder        |       |
| webalizer    | 12/20/2025 1:46 PM | File folder        |       |
| xampp        | 12/20/2025 1:46 PM | File folder        |       |
| applications | 6/15/2022 9:52 PM  | Brave HTML Docu... | 4 KB  |
| bitnami      | 6/15/2022 9:52 PM  | CSS Source File    | 1 KB  |
| favicon      | 7/16/2015 9:17 PM  | ICO File           | 31 KB |
| index        | 7/16/2015 9:17 PM  | PHP Source File    | 1 KB  |

*Screenshot 3: WordPress folder inside htdocs*

**Theory:** WordPress is a content management system (CMS) that allows creation of websites and e commerce stores with plugins like WooCommerce.

### Step 3: Create Local Database

1. Open browser: <http://localhost/phpmyadmin>
2. Click New
3. Enter database name: TrendSetterdb
4. Create

*Screenshot 4: phpMyAdmin showing trendsetterdb*

**Theory:** A database is required to store WordPress content, including products, settings, and user data.

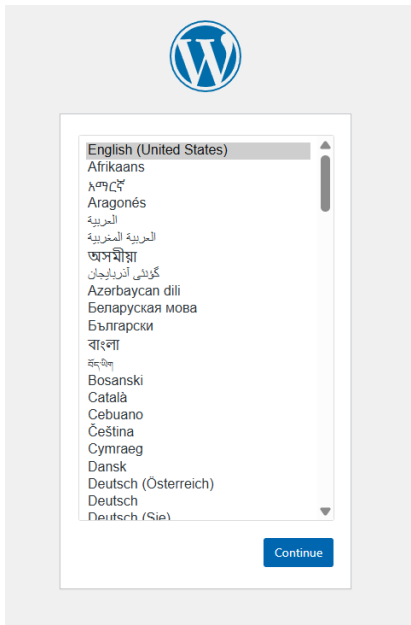

**Step 4: Install WordPress**

- 1. Open browser: <http://localhost/trendsetter>

# Index of /TrendSetter

| <u>Name</u>                                                                                                        | <u>Last modified</u> | <u>Size</u> | <u>Description</u> |
|--------------------------------------------------------------------------------------------------------------------|----------------------|-------------|--------------------|
| <hr/>                                                                                                              |                      |             |                    |
|  <a href="#">Parent Directory</a> |                      | -           |                    |
|  <a href="#">wordpress/</a>       | 2025-12-20 14:23     | -           |                    |
| <hr/>                                                                                                              |                      |             |                    |
| <i>Apache/2.4.58 (Win64) OpenSSL/3.1.3 PHP/8.2.12 Server at localhost Port 80</i>                                  |                      |             |                    |

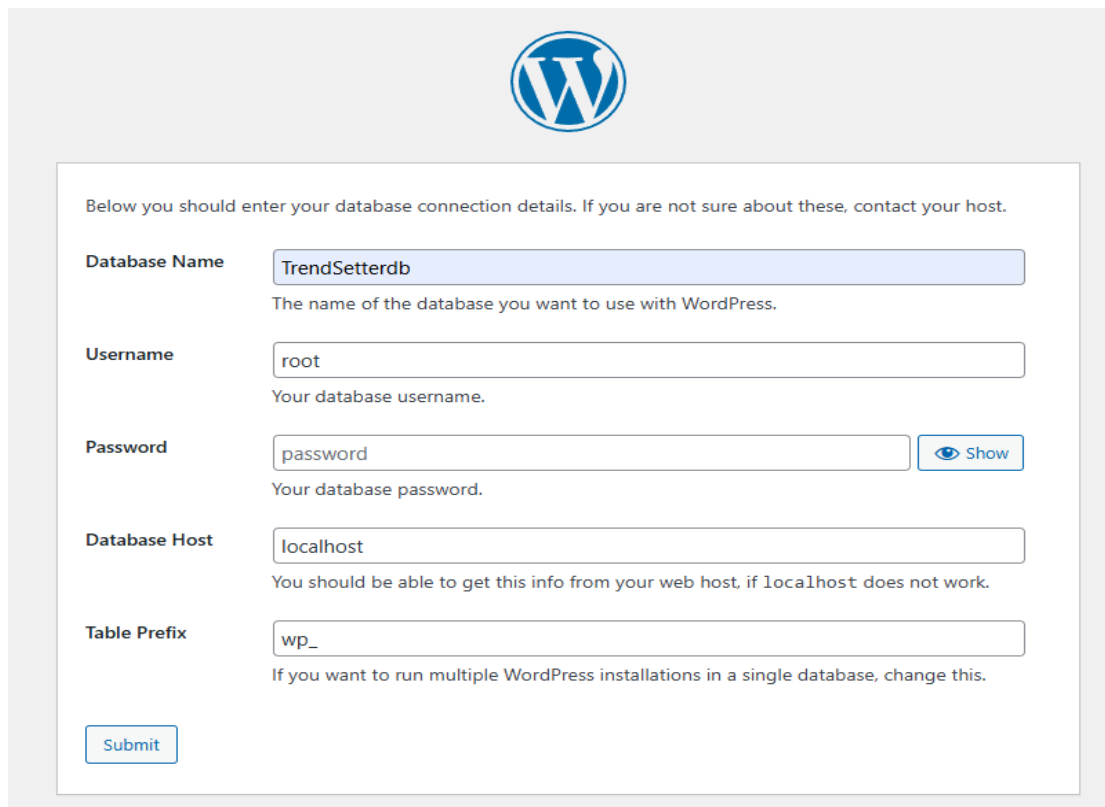

- 2. Select language and click continue

*Screenshot 6: WordPress Language Setup*

3. Enter Database info:

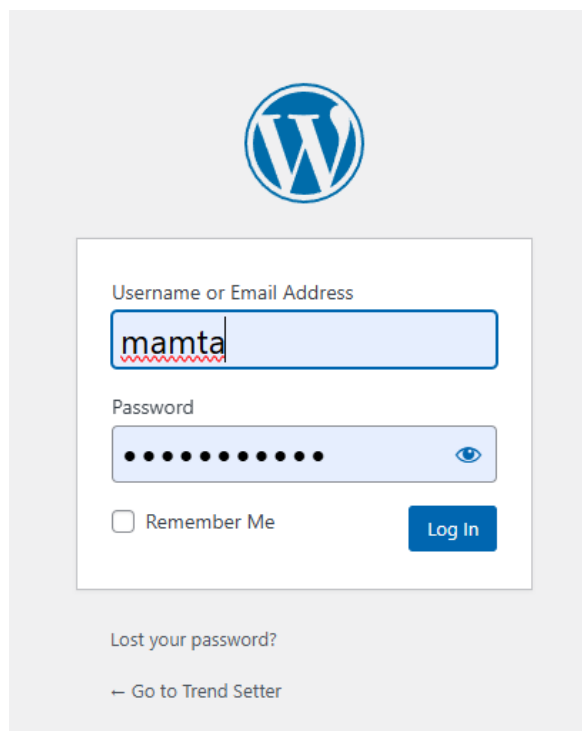

The screenshot shows the WordPress Database Information Setup screen. At the top is the WordPress logo. Below it, a message states: "Below you should enter your database connection details. If you are not sure about these, contact your host." The form contains five input fields with labels and instructions:

- Database Name:** The input field contains "TrendSetterdb". Below it, the instruction reads: "The name of the database you want to use with WordPress."
- Username:** The input field contains "root". Below it, the instruction reads: "Your database username."
- Password:** The input field contains "password". To the right of the field is a "Show" button with an eye icon. Below it, the instruction reads: "Your database password."
- Database Host:** The input field contains "localhost". Below it, the instruction reads: "You should be able to get this info from your web host, if localhost does not work."
- Table Prefix:** The input field contains "wp\_". Below it, the instruction reads: "If you want to run multiple WordPress installations in a single database, change this."

At the bottom left of the form is a "Submit" button.

*Screenshot 7: WordPress Database Information Setup*

4. Complete WordPress setup:

The screenshot shows the WordPress login screen. At the top is the WordPress logo. Below it is a login form with the following elements:

- Username or Email Address:** The input field contains "mamta".
- Password:** The input field is masked with dots. To the right of the field is an eye icon to toggle visibility.
- Remember Me:** An unchecked checkbox.
- Log In:** A blue button.

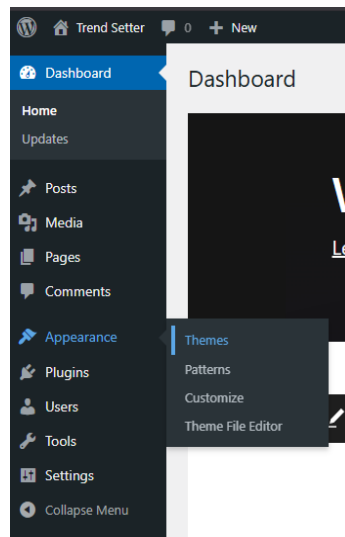

Below the login form, there is a link "Lost your password?" and a link "← Go to Trend Setter".

*Screenshot 8: WordPress setup screen*

**Theory:** This step connects WordPress to the local database and sets up the administrator account for managing the website.

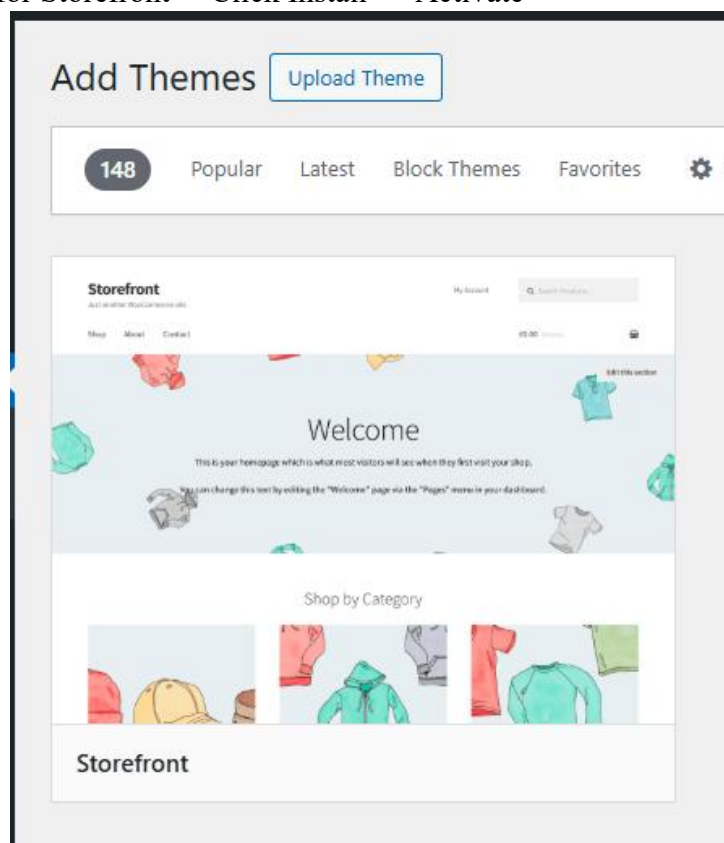

## Step 5: Install and activate a WordPress Theme

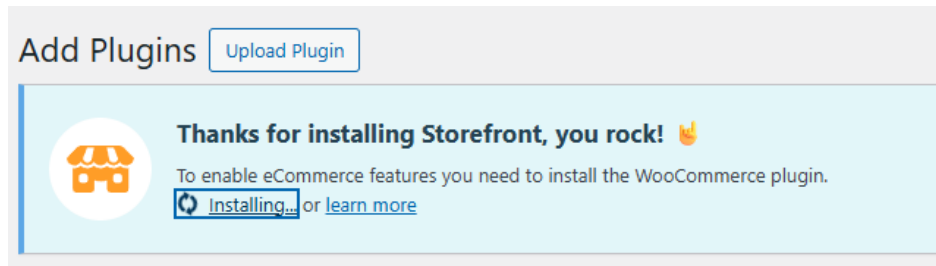

1. Dashboard → Appearance → Themes → Add New

*Screenshot9: Adding Themes*

2. Search for Storefront → Click Install → Activate

*Screenshot 10: Storefront theme installed and activated*

**Theory:** Themes define the visual layout and design of the site. StoreFront is WooCommerce-ready for e-commerce functionality.

### Step 6: Install WooCommerce Plugin

1. Dashboard → Plugins → Add New → Search WooCommerce
2. Click Install Now → Activate

## Welcome to Woo!

It's great to have you here with us! We'll be guiding you through the setup process – first, answer a few questions to tailor your experience.

Set up my store

[Skip guided setup](#)

*Screenshot 11: WooCommerce installed and activated*

3. Follow the setup wizard:

- Store details

## Tell us a bit about your store

We'll use this information to help you set up payments, shipping, and taxes, as well as recommending the best theme for your store.

### GIVE YOUR STORE A NAME

Trend Setter

Don't worry — you can always change it later!

### WHAT TYPE OF PRODUCTS OR SERVICES DO YOU PLAN TO SELL?

🔍 Clothing and accessories

### WHERE IS YOUR STORE LOCATED? \*

Nepal — Bagmati

### YOUR EMAIL ADDRESS

luniva086@gmail.com

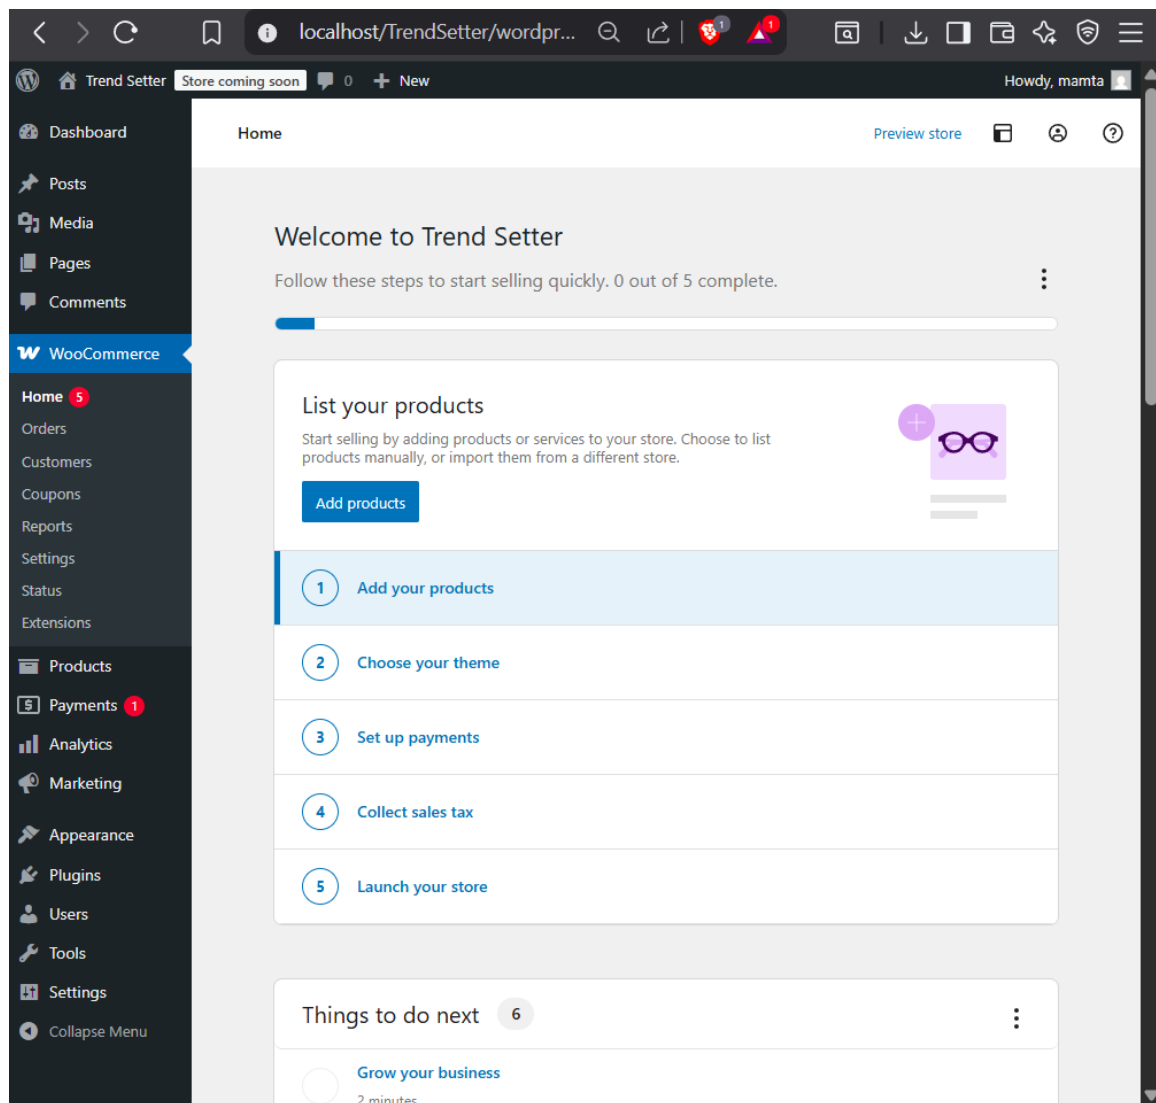

☐ Opt-in to receive tips, discounts, and recommendations from the Woo team directly in your inbox.

Continue

### *Screenshot 12: Following the setup Wizard*

- Currency
- Payment Methods
- Shipping options
- Add sample products

**Theory:** WooCommerce plugin transforms WordPress into a fully functional e-commerce platform.

*Screenshot 13: Following Store setup wizard*

### Step 7: Add Product Categories

1. Log in to your WordPress Dashboard:

<http://localhost/TrendSetter/wp-admin>

2. In the left menu, go to:

Products → Categories

3. On the left side of the page, fill in the details for the new category
4. Click Add New Category.

Note:

Deleting a category does not delete the products in that category. Instead, products that were only assigned to the deleted category are set to the category Uncategorized.

Add new category

Name

The name is how it appears on your site.

Slug

The "slug" is the URL-friendly version of the name. It is usually all lowercase and contains only letters, numbers, and hyphens.

Parent category

None

Assign a parent term to create a hierarchy. The term Jazz, for example, would be the parent of Bebop and Big Band.

Description

The description is not prominent by default; however, some themes may show it.

Ruched Button Down Puff Sleeve Top in Yellow is a bright and playful piece that adds charm to any outfit. Featuring a collared neckline, button-down front, and gathered detailing at the waist, this puff sleeve top blends classic tailoring with a fun, feminine vibe. The soft yellow stripes make it a standout for both casual and chic outings.

Made from 100% cotton, this puff sleeve top is breathable, lightweight, and easy to wear all day. The ruched fit keeps it flattering while the puff sleeves bring in a touch of retro-inspired flair. This puff sleeve top is your versatile pick for days when you want comfort

Version 10.4.2

Screenshot 16: All products pages

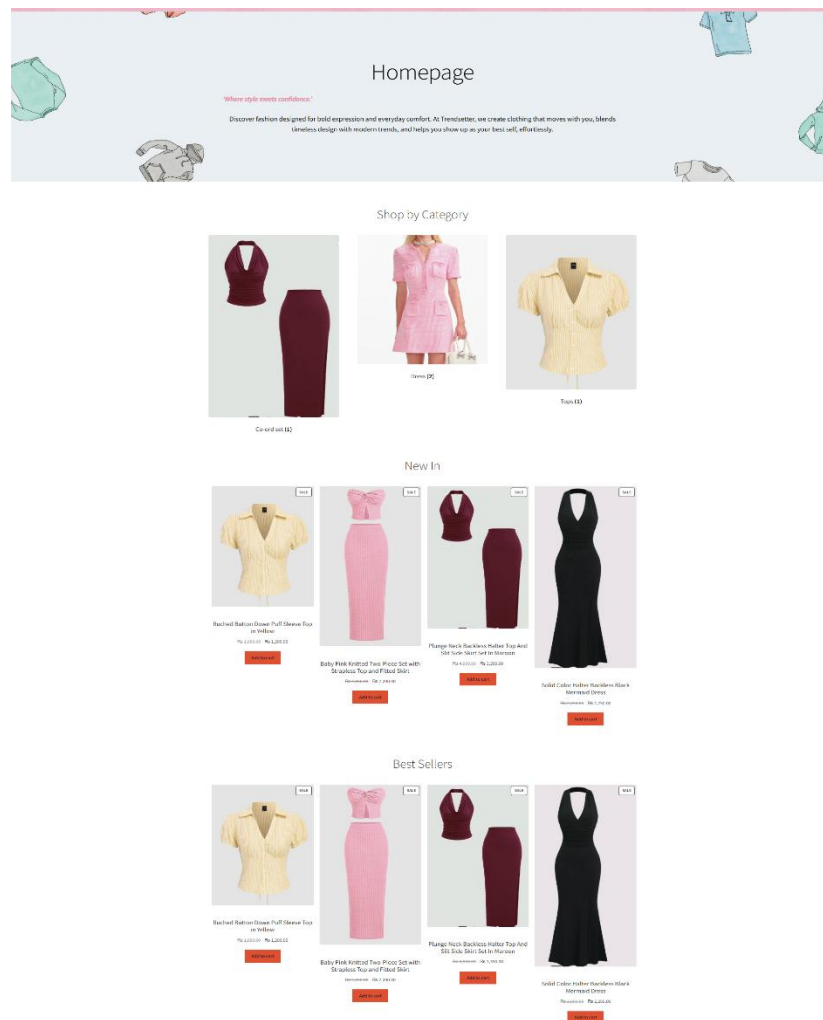

## Theory:

This page shows all the products available on the website. Customers can browse, view prices, and click on products for more details. It gives an overview of the store's inventory.

## Step 11: Home Page

### Steps:

1. Open your store homepage in the browser: <http://localhost/TrendSetter>

*Screenshot 17: Home page*

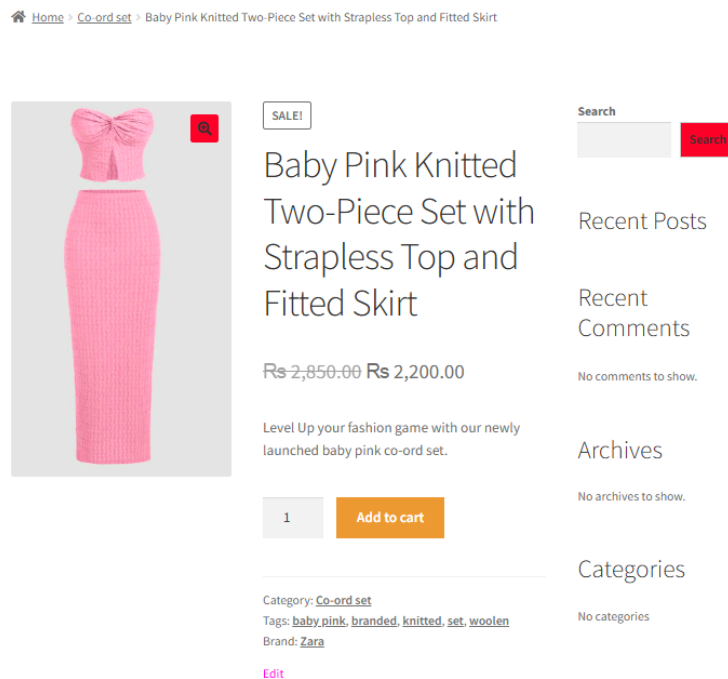

## Theory:

The Home Page or Landing Page is the first page visitors see. It provides an overview of the store, highlights key products, and guides users to explore product categories and make purchases.

## Step 12: Add to Cart Feature

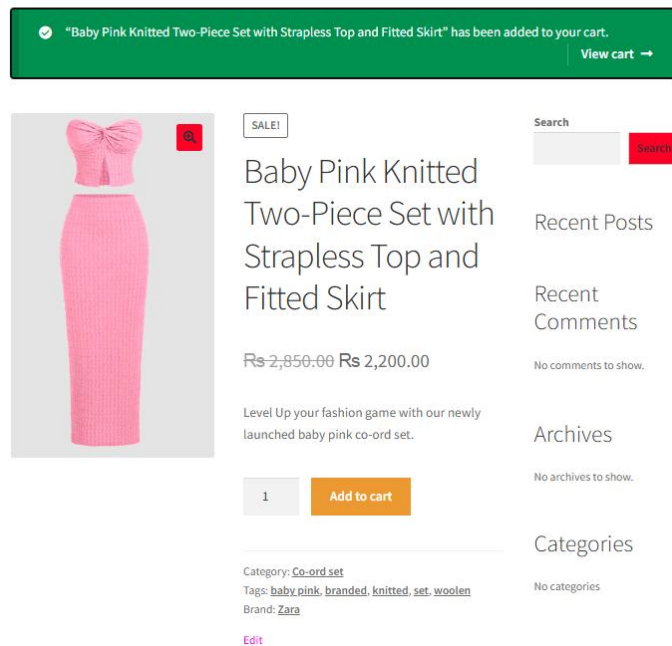

### Steps:

1. Open your store homepage: <http://localhost/TrendSetter>
2. Navigate to a product you want to purchase

*Screenshot 18: Navigating product*

3. Click the Add to Cart button on the product page or product listing.
4. A confirmation appears with a View Cart button.
5. Verify that the correct product, quantity, and price are added to the cart.

*Screenshot 19: Add to Cart Features*

### Theory:

The Add to Cart feature allows customers to select products they wish to purchase and temporarily store them in a cart before proceeding to check out. It is essential for managing multiple products in an order.

### Step 13: Checkout Feature

#### Steps:

1. After adding products to the cart, click the Cart link or icon in the header.
2. Verify the products, quantity, and total price.
3. Click Proceed to Checkout.

[Home](#) > Cart

## Cart

| PRODUCT                                                                                                                                                                                                                                                                                                                                                                      | TOTAL       | CART TOTALS                                                                                                                                                                                                                             |

## **REFLECTION AND CONCLUSION**

This lab helped me understand how to install and configure XAMPP, WordPress, and WooCommerce locally. Setting up TrendSetter allowed me to see how an e-commerce workflow operates in a safe environment. I learned how to create databases, configure plugins, and test store functionality before moving to live hosting. This boosted my confidence in managing WordPress-based stores and made me able to create any web e-commerce platform from scratch.
